

## Save the Date

# TERATEC 2011 FORUM, June 28 & 29, 2011

**We are pleased to announce the 6th edition of the TERATEC Forum, which will be held Tuesday and Wednesday, June 28 & 29, 2011 at Ecole Polytechnique (91120 Palaiseau, France).**

By bringing together the best international experts in high-performance computing and numerical design and simulation, the TERATEC Forum confirms their importance for companies' competitiveness and innovation capabilities. Last June, the TERATEC Forum brought together more than 700 people, underlining the economic and scientific vitality of HPC around major industrial and community stakes and the major role that France now plays in this field.

- **On Tuesday, June 28, the plenary sessions** will illustrate the increasing impact of high performance computing in many industrial and research fields and its role in major scientific and technological challenges, with the participation of top international industrial users, leading providers of these technologies and key persons from the political, economic and academic worlds.
- **On Wednesday, June 29, the technical workshops** will address major HPC themes. They will be the occasion to review the most important collaborative projects involving industry and research.
- **A large exhibition** will present the products and innovations offered by the major HPC players: manufacturers and editors, suppliers and integrators of hardware, software and services solutions, universities and research laboratories, competitiveness clusters and public organisations, etc.

Please forward this release to members of your teams concerned by TERATEC and announce it, whenever possible, in your pages devoted to events, professional seminars and scientific conferences.

You are invited to contact us without delay if you would like to be a sponsor of the TERATEC 2011 Forum, reserve a booth in the exhibition area, propose a paper as part of the conference or for any other information concerning TERATEC and its activities.

### **About TERATEC**

*Created in 2004, today the Teratec association brings together more than 70 partners from industry and research, which have in common the development and use of tools - hardware, software and services - for high performance computing, design and simulation, and distribute them to the widest possible audience. The purpose of the association is to federate and coordinate this community and to facilitate exchanges and collaborations between the players.*
